

Mirrors

Preedy Glass have long recognised the trend towards the use of mirrors to create the impression of space, and to maximise light sources whether by major commercial enterprises including shops, hotels, offices and showrooms, or by the discerning private customer. The possibilities are endless, and the options available from Preedy Glass are extensive with the emphasis on high quality and individual requirements.

Antique mirrors are a speciality with a selection of different finishes stocked, and various tinted mirrors are available to blend in tastefully with the interior design.

Low iron mirror is a new addition to the range, with more clarity and reflective qualities than standard mirror enhancing the true colours of its surroundings.

Mirrors can be bevelled, decorated, or superimposed onto one another to give a distinct individual finish, and can be professionally measured and fitted by Preedy Glass, using traditional mechanical fixings, or fixed with adhesive so no fixings are visible.

For situations where one-way vision only is required such as security or surveillance, Preedy Glass offer Spy mirror or Venetian Stripe Mirror.

Pre-acid silvered is used for wall cladding, and is mirror that is satin acid etched on the surface, to give an unusual modern decorative look, as the reflective qualities of the mirror are diffused by the etching.
